

Any business can increase profits or reduce operating costs with simple Asset Management controls

Every business accumulates “**stuff**”, some of that “**stuff**” is expensive, some of it will go missing, some of it is important, some will get broken and some “**stuff**” is business critical, enabling your business to continue doing what it does. Put simply if that “**stuff**” is not managed correctly, it can end up costing unnecessary cash.

AssetBlox is an Asset Management Software suite with a cloud-based database, designed to hold all of your Asset data.

Data is accessed and updated either in the web console or via a smartphone app, which also facilitates Barcode and RFID scanning capabilities.

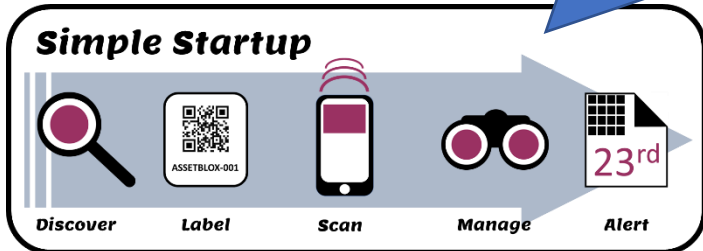

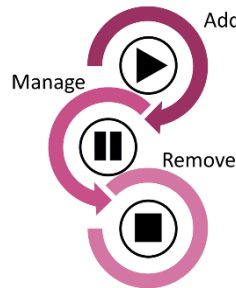

AssetBlox allows the movement of your assets to be tracked by staff using the app, updating data as changes happen.

Data and functionality is then accessed via reports and graphical dashboards in the web console

Key AssetBlox Functionality
